An unofficial research report of the Ministry of Planning with support from the United Nations Development Programme, Cambodia. The publication contains findings of the Commune Database analysis and is intended for issue awareness, for policy advocacy and for references only. As such, the findings are provisional and are without formal editing. Views expressed are not necessarily those of the Ministry of Planning and of the UNDP.

The information contained in this document may be reproduced, used and shared without prior permission but with acknowledgement of this publication as the source: Poverty and Select CMDGs Maps and Charts 2004-2008, Preliminary Results of The CDB-Based Research and Analysis Project, Ministry of Planning and NCDD M&E Unit.

## Foreword

The main development goal of the Royal Government of Cambodia, under the leadership of **Samdech Akka Moha Sena Padei Techo Hun Sen**, is poverty reduction. Also, pro-poor investment and services through D&D reform are Royal government priorities. Information to implement these priorities and information related to livelihoods of the local people are indispensable. In order to fulfill their functions and responsibilities including implementation of decentralization policies and programs, the commune and sangkat councils need to have in their hands ready information that is updated and is reflective of true aspects of their communes and sangkats.

The Commune/Sangkat Database (CDB) has been established in response to the needs of the communes and sangkats (by and for the communes and sangkats) in order for them to make meaningful decisions for their annual development and investment planning. The task of collecting information for the Commune/Sangkat Database (CDB) is implemented by the village chiefs, communes and sangkat clerks throughout the country, whiles the Ministry of Planning, especially the Working Group on D&D Planning and Sethkomar (headed by H.E. Hou Taing Eng), only provides technical support. These include questionnaire design, data collection procedures, computer transformation of raw data into situational profiles of communes and sangkats, and training of capital/provincial officials of Department of Planning who would then train the supporting officials of the commune /sangkat Councils. The recording of information from the Commune/ Sangkat Database is conducted in December every year. Since the data collection is done in all villages in the country, the process can be considered as a village census. The CDB is a collaborative effort with bottom up participatory process: since its use to support Seila Program in 2002 until the current national decentralization and deconcentration reform managed by the National Committee for Democratic Development at Sub National Levels ( NCDD), the Working Group on D&D Planning and SethKomar of the Ministry of Planning has collaborated successfully with Development Partners and in particular, with UNDP PSDD and Capital/ Provincial Planning Departments in collecting, updating and maintaining the Commune/Sangkat database (CDB). The costs covering the CDB data collection, data capture, data interpretation, database maintenance and the dissemination of results back to the communes and sangkats is relatively low, when compared with other methods of data collection and surveys.

The Ministry of Planning is currently very active in information gathering activities such as population census, demographic surveys, socio-economic surveys, poor household identification survey, etc. While these activities serve different purposes, information collection for the Commune/ Sangkat Database (CDB) is specifically designed to assist the commune/Sangkat councils with annual development and investment plans.

The CDB since 2003 and to this date, has collected, updated and accumulated broad range of information nationwide – information that can be analyzed and be used to increase understanding about and to support other developmental priorities and activities. In this regard, UNDP, its PSDD and NCDD M&E Unit conducted independant analyses of the CDB. The results show that while there are a few discrepancies, the CDB data are reliable. Based on the CDB, NCDD M&E Unit developed a method to estimate poverty rate by the Commune/Sangkat and produced poverty maps and chart showing changes in poverty and progress with select other CMDGs in all 1621 communes/sangkats in the country. The maps and related charts are now compiled and presented via this handbook and are intended to support sub-national local development planning, targeting of activities as well as to localize sub-national monitoring of the CMDGs.

In this sense, this work is timely and is complimentary to any other related studies by other organizations. The Ministry of Planning sincerely hopes that this work will contribute to increased understanding about changing poverty and about progress with some of the key CMDG goals and targets as well as to assist with informed planning and targeted interventions at the national and sub-national levels.

Finally, the Ministry of Planning deeply thanks and appreciates the support it received from the Secretariat of NCDD, the NCDD M&E Unit and UNDP Cambodia in producing this book. 

Senior Minister and Minister of Planning

Chhay Than

## The Commune Database (CDB)

Prepared by the Working Group on D&D and Seth Koma (SK), Ministry of Planning

### What is the Commune Database (CDB)?

- CDB is an information system developed by the ministry of planning and development partners to support commune sangkat (CS) planning, CS fund allocation as well as sub-national administration management and development.
- CDB computer software is used for entry and record data from village and commune/sangkat, and for making automatic calculation and generating reports. CDB system records raw data in MS Access program while the processed data is sent to MS Word and Excel program.

### Objectives of CDB

The main objectives of CDB are to:

- keep yearly record of official data related to economic, social, natural resources and environmental, public administration and security, social and gender information as collected by village Chiefs and Commune/Sangkats clerks .
- provide processed data from original data of village and Commune/Sangkat to Commune/Sangkat council, development partner and line departments.

### Background of CDB

CDB has been developed based on the operational experience of Ministry of Planning within 24 capital and provincial, with technical support from UNDP/OPS/CARERE2 and PLG since 1998, and Seila Program during 2001-2006 and UNDP PSDD and NCDD to this date. CDB was developed based on the principles of: user friendliness, feasibility, time and cost effectiveness and data quality assurance.

### CDB development steps:

CDB has evolved and been updated as follows:

- Step 1: from 1998-2001, was the preparatory/development step with pilots in some target provinces.
- Step 2: during 2002-2005, (CDB5) was the full implementation step. CDB was developed as an information system and expanded to all villages and Commune/Sangkat in the whole country.
- Step 3: from 2006, (CDB6) many additional indicators related to local socio-economic situation have been added to the CDB.

### CDB data collection process and cycle:

- Data in CDB is strongly dependant on the ability to collect data from village chiefs and commune/sangkat.
- Village and commune/sangkat data is collected by village chief and commune/sangkat clerk respectively. This statistic information/data is collected in the form of annual statistic report from data book records of villages and commune/sangkat.
- Village and commune/sangkat data must be re-recorded every year in December and sent to capital and provincial department of planning to enter the data into computer system from January to March in order to process and to produce documents on commune/sangkat situations ( Commune/Sangkat Profile). These documents would then sent back to commune/sangkat between March and April every year.

## The use of CDB

It is the right of commune/sangkat council and development partners to use CDB. However, they should also consider the instructions from capital and provincial levels.

- National 
- Provincial 
- Municipality/District/Khan 
- Commune/Sangkat 
- Village 

- CDB supply information and generate output files and reports on: commune/sangkat situation, municipal, district and khan situation, capital and provincial situation.
- CDB can generate other special and customized reports as needed in developing sub-national plans.
- Documents generated from CDB can help make planning, decisions and identify problems by comparing the importance of the problems existing in one village with those in other villages and similarly with communes, districts and provinces.

## Benefits of CDB

- CDB produces documents in the report form for all indicators in village book records. Commune/sangkat council can use documents on commune/sangkat situation ( Commune/ Sangkat Profile) to monitor and to evaluate the progress of commune/sangkat development and to prepare progress reports at the end of term of each commune/sangkat council.
- CDB (CDB6) can create graphs and tables with geographical coding which facilitate the presentation of this data in the form of map by the indicator at commune/sangkat, municipal, district/khan or capital/provincial levels.
- CDB6 is able to generate reports with comparison of some indicators used in each year and to analyze on their changes and trends.
- After several studies on data related to poverty in the country, ministry of planning has used CDB data to set proxy indicators for commune/sangkat poverty rating. Ministry of planning has used the proxy indicators to rate the poverty level in all commune/sangkat in the country to support governing council of commune/sangkat fund in the allocation of Commune Sangkat Development Fund annually.
- Poverty rating from CDB6 helps provide an appropriate basis for comparing poverty and related needs with potential resources.
- CDB6 program makes it easy for user to use information by setting village as the basis for all capital and provinces in Cambodia and to develop short reports, tables and graphs as well as summarize findings according to the needs of line departments, NGOs/IOs and other development agencies.

- Raw data table is in Excel format, which allows researchers/scholars to make deep analysis on indicators or use as the basis for setting the sample size for further analysis.

### **Conclusions on CDB**

- CDB is a set of data collected by local agents, processed by Department of Planning of capital/provincial with ministry of planning guidance and sent back at once to local institutions to support the process of commune/sangkat development plan design and commune/sangkat investment program in all 1621 commune/sangkat.
- CDB supplies information from specific local sources (all villages in the country) with regular timeline.
- As data is collected from all villages in the country, the data collection procedure in CDB is identical to that of the regular census.
- If the competence of users, especially commune/sangkat and sub-national officers is enhanced, CDB will be more effective as planning and decision making tool.
- In order to increase the effectiveness of CDB in good governance and D&D reform, it is important to deliver training/coaching on CDB product to commune/sangkat and sub-national administration officers. It is a significant suggestion that all development partners should consider and support.

## Notes on Poverty estimation using the Commune Database

- 1) The CDB is an administrative database. It is based on annual enumeration of village and commune information. It is designed and used in Commune Planning and in CS Fund Allocation (poverty scoring) purposes. The CDB data has many other uses and potentials. One such potential of the CDB is as a tool to monitor and to analyze poverty and some select CMDG goals across geographic and administrative boundaries and over time.
- 2) Regarding *CMDG #1.1: Extreme poverty* – people below poverty line measurement and analysis in this document, indirect measure of poverty in terms of consumption and of income expenditure is used. For example, 2004 lowest percentile 35<sup>th</sup> was used where 35% of people were below the total poverty line who did not have the income to spend on minimum daily food plus non-food items as per CSES2003/04 definition. The lowest percentile 35<sup>th</sup> in 2004 is used as relative poverty line at national level for the income or consumption expenditure distribution.
- a) The CDB does not have household level information. However, it does have information that are associated with consumption namely, household size, literacy levels, housing characteristics and access to basic services.
- b) The CSES 2004 and the data from the Identification of Poor Household Programme Survey Round 1 and Round 2, MoP are consulted as the reference household level consumption and income data sources.
- c) Regression coefficients are then derived from the IDPoor Household Survey Data R1 and R2.
- d) A set of 13 CDB variables containing information which are predictor of consumption expenditure namely, household size, literacy levels, housing characteristics and access to basic services are identified and are then used with regression coefficient to generate poverty headcount rate (see below):

Poverty rate-Household (Level1+Level2) IDPoor (MoP)	Regression Coefficient	Standard Error	T-Value (Ho: B=0)	Prob Level	Lower 95% C.L.	Upper 95% C.L.
Intercept	<b>24.19</b>	2.74	8.47	0.00	17.82	28.56
No latrine per family	<b>10.45</b>	1.66	6.30	0.00	7.19	13.70
TV per family	<b>-5.17</b>	1.06	-4.88	0.00	-7.25	-3.10
Mountain/plateau region: 1=Yes, 0=Otherwise	<b>3.50</b>	1.19	2.98	0.00	1.21	5.91
<i>Tonle Sap region: Reference</i>	<b>0.00</b>	<b>0.00</b>	<b>0.00</b>	<b>0.00</b>	<b>0.00</b>	<b>0.00</b>
Plain region: 1=Yes, 0=Otherwise	<b>-3.50</b>	1.19	-2.98	0.00	-1.21	-5.91
Coastal region: 1=Yes, 0=Otherwise	<b>-7.00</b>	1.19	-6.00	0.00	-5.00	-9.00
Phnom Penh: 1=Yes, 0=Otherwise	<b>-18.00</b>	1.19	-12.00	0.00	-16.00	-20.00
Urban area (exclude Phnom penh): 1=Yes, 0=Otherwise	<b>-5.00</b>	0.50	-6.00	0.00	-4.02	-6.98
Motobike per family	<b>-10.68</b>	1.38	-7.75	0.00	-13.38	-7.98
Household size	<b>1.53</b>	0.25	6.16	0.00	1.04	2.01
Concret house per family	<b>-6.37</b>	7.50	-0.85	0.40	-21.09	8.35
Ratio of literate women18-64	<b>-2.47</b>	1.07	-2.31	0.02	-4.56	-0.38
Ratio of men18-64 to all	<b>-17.45</b>	4.97	-3.51	0.00	-27.19	-7.70
Thach house per family	<b>13.00</b>	1.14	8.30	0.00	12.00	14.00
Bicycle per family	<b>-0.79</b>	0.51	-1.56	0.12	-1.78	0.21
Ratio of house with electricity	<b>-3.08</b>	1.55	-1.99	0.05	-6.11	-0.04
Ratio of family use TBA	<b>26.57</b>	4.01	6.63	0.00	18.71	34.42
Ratio of children 6-14 not go to school	<b>2.20</b>	1.13	1.96	0.05	0.00	4.41
Ratio water in home less than 150m	<b>-1.54</b>	0.26	-2.00	0.05	-6.12	-0.05

e) An indirect and relative poverty head count rates are estimated using a *robust multi-level mixed effect regression* analysis model. The model is adjusted for non-normality, heteroscedasticity, for outlier observation for both x and y and for intra cluster correlation (Commune as random effect). The indicators and their impact on the predicted poverty rate are: no latrine (+), TV(-), Mountain/plateau region(+), Plain region (- ), Costal region(- -), Phnom Penh region ( - - -), Urban area (-), Motorbike (-), Bicycle (-), house with electricity (-), Family using TBA (+), Children 6-14 years not go to school (+) and house with water less than 150m (-).

f) This model of NCDD PST M&E Unit uses current year CDB to estimate poverty headcount rate for the following year. The model is based on and it uses detailed household level expenditure and poverty information publicly available from the Ministry of Planning's IDPoor Household Survey Round 1 and Round 2 (2007 and 2008) conducted in some districts in Kratie, Seam Reap, Otdar Meanchey, Kampong Cham and Prey Veng.

g) The rates are then aggregated and rolled up to the desired geographic level and are expressed into maps and charts in this document.

h) This set of above listed 13 CDB variables with (+) and negative (-) impact on the poverty rate can now be used to generate commune poverty rate/ score for each year.

3) Regarding analysis of CMDG#1.2: *Increasing the share of poorest quintile in national consumption from 7.4% in 1993 to 11% in 2015*, per capita consumption rates are estimated using regression analysis model with principal component analysis and factor analysis techniques. a consumption regression model was used to generate . The CDB and the CSES 2003/04 IDPoor Household survey data were used.

a) The indicators and their impact on the predicted per capita consumption expenditure rate are: no latrine (-), TV(+), Mountain/plateau region(-), Plain region (+), Costal region(++)+, Phnom Penh region (+++), Urban area (+), Motorbike (+), Household size (-), Concrete house (+), Literate women 18-64 (+), Number of men 18-64 (+), Thatch house (-), Bicycle (+), house with electricity (+), Family using TBA (-), Children 6-14 years not go to school (-) and house with water less than 150m (+).

4) For rest of the CMDG goals, indicator information inside the CDB are aggregated by the GIS level up for a given year and an average is used.

5) Progress towards each goal by comparing actual annual progress is not attempted in this document.

6) The CDB-based findings in this document are not compared to corresponding findings generated by relevant other surveys and work in other domains.

For details on the methodology and for questions, please contact Mr. Ny Boret, NCDD PST M&E Unit, NCDD Secretariat, MoI, email: [nyboret@ncdd.gov.kh](mailto:nyboret@ncdd.gov.kh)
